The Alarms of SelenaFirewall (Windows)A firewall is a software program that prevents outside users from accessing your PC, and keeps them from making changes to your system settings. If you can create an account in your firewall program, it becomes easy to put programs on your PC that add more security and protection. One of the ways that a firewall program works is to log network traffic by using a list of all the sites that you have access to. This is a list of the sites that are visited in a given period of time, and the entries that your firewall program keeps is called a log. This is stored in a file, or sometimes a database, that logs all the traffic that goes in and out of your PC. These logs are extremely useful to people who want to track what is going on with their network. Allfirewall is a part of the Ad-Aware family of anti-spyware programs, and provides advanced features such as a real-time firewall, personal firewall, adware scanner, rogue-application protector, and a spam filter. Allfirewall lets you decide which of these features you want to run on your own, depending on what's happening with your system at any given time. Once you're sure you want to use it, however, Allfirewall can be a real help in keeping b7e8fdf5c8
